Data:

Western blot analysis of USP43 expression in human normal uterus (A) whole cell lysates. (Predicted band size: 122 kD; Observed band size: 112 kD)

Immunohistochemical analysis of USP43 staining in human stomach formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counter-stained with haematoxylin and mounted with DPX.
